PENETRATING BASE

Performance

MirrorSEAL is a state of the art, continuous filament, single-ply, fluid-applied roofing system that is stronger, lighter and easier to apply. Unlike most roofing systems, MirrorSEAL is a water-based polymer which is an adhesive sealant, not a plug and fill product, and more energy efficient then ordinary roofing systems. It was developed after 4½ years of testing, and thousands of chemical formulations.

Virtually No Odor

O VOC

No Solvents

Human Friendly

Excellent Flexibility Strong Adhesion

No Asbestos

Meets FDA 175-300

Water-Ponding Resistant

Exceptional Ultraviolet Resistance

To the Best of Our Knowledge, No

Carcinogens or Neurotoxins

Surface Preparation

The entire roof's surface must be thoroughly cleaned. The roof must be free from all oil, grease, dust, debris and water. (Remember, the System will only be as good as the surface it's being bonded to.)

Pre-patch all holes, cracks and bubbles. Let the air out of bubbles as shown by slitting with a utility knife. Apply strips of MirrorFAB with a 6" overlap. Brush with MirrorSEAL Penetrating Base until fabric is thoroughly saturated

On new wood decks or rigid insulation caulk all seams and level with the roof surface. Caulk or fill all knotholes, wood splits and other surface irregularities with Mucky-Puck and level with the roof surface. Cover all caulked seams by saturating a 4" wide strip of MirrorFAB with MirrorSEAL Penetrating Base and placing it along the entire length of the seam.

Application

Step 1: Apply Penetrating Base Using a brush or roller, cover an area approximately 4 feet wide and 4 feet long with a liberal, smooth, even coating of MirrorSEAL Penetrating Base.

Step 2: Roll our MirrorFAB

Roll MirrorFAB over the area you just covered with the MirrorSEAL Penetrating Base. Using a "V" stroke with the roller, fully saturate the fabric with base coat. It is important that all fabric is fully saturated and all air bubbles removed. Once MirrorFAB has been overlaid the liberally applied base coat, use pressure and "V" strokes on a long-handled, 1" to 11/4" nap paint roller to ensure airless, evenly-applied MirrorFAB surface.

Overlap each strip of fabric approximately 2". Strips will self-vulcanize creating a seamless under surface. Overlap edging, ductwork and other mechanical protrusions 4" to 8".

Technical Data

Vehicle Type Salt	: Water Based
Pigment Type Tita	anium Dioxide
Solids by Volume	81% +-2%
Theoretical Coverage may vary depending on perosity	3ft ² / pound .62 m ² /kg
Dry Time @ 77° F 4HR depend	ing on climatic conditions
Dries By Wate	er evaporation
FDA Approval	Meets 175-300
Viscosity	80-85 ku
Flash Point(Seta)	None
Surface Temperature at Applicatio Gloss (60')=0-2	-Min 40° F -Max95° F
Clean Up With	Water
Weight Per Gallon ¹	10 +/ - 2%
Volatile Organic Compounds (VOC)	0
Color	Ivory White

HEALTH HAZARD	0 - Slight
FLAMMABILTY HAZARD	0 - Minimal
REACTIVE HAZARD	0 - Minimal
PERSONAL PROTECTION	E - Glasses, Gloves, Dust Respirator
